Post-tetanic potentiation &quot;Dynamin-1deletion enhances post-tetanic Post-  
tetanic potentiation (PTP) is a form of synaptic plasticity which is short-lived  
and results in increased frequency of miniature excitatory postsynaptic  
potentials (mEPSPs) or currents (EPSCs) with no effect on amplitude in the  
spontaneous postsynaptic potential. 147–154. Mahapatra, Satyajit; Lou, Xuelin

and Vice-Chancellor of Utkal University, Bhubaneswar. Odd37243fe was an  
Indian botanist. His research work comprised mainly fundamental and applied  
aspects of plant physiology, experimental plant morphology, and ecological  
studies of plant environment. He studied water hyacinth and other aquatic  
weeds, respiration in leaves and apples, transpiration and heat resistance in  
plants, rice and algae and storage of apples. Odd37243fe He was... Odd37243fe

Madhu Sudan Kanungo He has completed his PhD on Physiology under the scientist Prof. Clifford Ladd Prosser from University of Illinois Madhu Sudan Kanungo (1 April 1927 – 26 July 2011) was an Indian scientist in the field of gerontology and neuroscience as well as a teacher of molecular biology and biochemistry. He held the post of BHU Emeritus professor in zoology at the Banaras Hindu University and was also the Chancellor, Nagaland University till his death. He is known for his theories on how gene expression changes with age and the role of this phenomenon in ageing, which is widely accepted as "Gene expression theory of Aging". His major contribution to the world of science is the development of a single-fiber technique for recording afferent impulses from individual sensory receptors. Paintal discovered several sensory receptors including atrial B receptors, pulmonary J-receptors, ventricular pressure receptors, stomach stretch receptors, and muscle pain receptors. They have set the beginning of new era in physiological understanding. Odd37243fe
