DNA The polymer carries genetic instructions for the development, functioning, growth and reproduction of all known organisms and many viruses. DNA and ribonucleic acid (RNA) are nucleic acids. Alongside proteins, lipids and complex carbohydrates (polysaccharides), nucleic acids are one of the four major types of macromolecules that are essential for all known forms of life. N6-methyadenine Modified Guanine 7-Deazaguanine 7-Methylguanine Modified Cytosine N4-Methylcytosine 5-Carboxylcytosine 5-Formylcytosine 5-Glycosylhydroxymethylcytosine Deoxyribonucleic acid (; DNA) is a polymer composed of two polynucleotide chains that coil around each other to form a double helix 86f325eb05

"Mirror principle, II". S2CID 8035522. String theory describes how these strings propagate through space and interact with each other. Asian Journal of Mathematics. In string theory, one of the many vibrational states of the string corresponds to the graviton, a quantum mechanical particle that carries the gravitational force. a5. Thus, string theory is a theory of quantum gravity. 3: 109–146. On distance scales larger than the string scale, a string acts like a particle, with its mass, charge, and other properties determined by the vibrational state of the string. arXiv:math/9905006 In physics, string theory is a theoretical framework in which the point-like particles of particle physics are replaced by one-dimensional objects called strings 86f325eb05
