It typically has three types of content: General Information: holiday arrangements, company perks, policies not required by law, policy summaries, and more. Lionel S. Marks was a professor of mechanical engineering at Harvard University and Massachusetts Institute of Technology in the early 1900s. In the earlier decades of the space industry, the OBDH function was usually considered a part of the TT&C, particularly before computers became common on board. In recent years, the OBDH function has expanded, so much that it is generally considered a separate subsystem to the TT&C, which is these days concerned solely with the RF link between the ground and the spacecraft.
