History of the Internet Archived from the original on March 4, 2016. The history of the Internet originated in the efforts of scientists and engineers to build and interconnect computer networks. The Internet Protocol Suite, the set of rules used to communicate between networks and devices on the Internet, arose from research and development in the United States and involved international collaboration, particularly with researchers in the United Kingdom and France. Edward Snowden In 2011, he returned to Maryland, where Edward Joseph Snowden (born June 21, 1983) is a former National Security Agency (NSA)

intelligence contractor and whistleblower who leaked classified documents revealing the existence of global surveillance programs. India, where he enrolled himself in a local IT institute to learn core Java programming and advanced ethical hacking 4883b6e8dc

Skype It was available on various desktop, mobile, and video game console platforms. TruphoneOut and NimbuzzOut as a competing paid service) in any Symbian or Java environment. Nimbuzz made Skype available to BlackBerry users, and Fring Skype () was a proprietary telecommunications application operated by Skype Technologies, a division of Microsoft, best known for IP-based videotelephony, videoconferencing and voice calls. It also had instant messaging, file transfer, debit-based calls to landline and mobile telephones (over traditional telephone networks), and other features 4883b6e8dc

Videotelephony based means, it is using standardized web technologies only such as HTML, JavaScript and CSS. Today, videotelephony is widespread. Videophones are standalone devices for video calling (compare Telephone). There are many terms to refer to videotelephony. The name videophone never became as standardized as its earlier Videotelephony (also known as videoconferencing or video calling or telepresence) is the use of audio and video for simultaneous two-way communication. Videoconferencing is used in telepresence, whose goal is to create the illusion that remote participants are in the same room. Videoconferencing implies group communication. In the present day, devices like smartphones and computers are capable of video calling, reducing the demand for separate videophones 4883b6e8dc

Computer science was an emerging discipline in the late 1950s that began to consider time-sharing between computer users, and later, the possibility of

achieving this over wide area networks. J. C. R. Licklider developed the idea of a universal network at the Information Processing Techniques Office (IPTO) of the United States Department of Defense (DoD) Advanced Research Projects Agency (ARPA).... 4883b6e8dc events about uses of computational tools in biotechnology and similar fields (except for improvements to the underlying computational tools) as well as events in media-psychology except when those are directly linked to computational tools 4883b6e8dc The Web was invented by English computer scientist Tim Berners-Lee while at CERN in 1989 and opened to the public in 1993. It was conceived as a "universal linked information system". Documents and other media content are made available to the network through web servers and can be accessed by programs such as web browsers. Servers and resources on the World Wide Web are identified and located through character strings called uniform... 4883b6e8dc The concept of videotelephony was conceived in the late 19th century, and versions were

demonstrated to the public starting in the 1930s. In April, 1930, reporters gathered at AT&T... 4883b6e8dc

World Wide Web Retrieved 27 May 2009. Archived from the original on 24 The World Wide Web (also known as WWW or simply the Web) is an information system that enables content sharing over the Internet through user-friendly ways meant to appeal to users beyond IT specialists and hobbyists. IDG. Hamilton, Naomi (31 July 2008). It allows documents and other web resources to be accessed over the Internet according to specific rules of the Hypertext Transfer Protocol (HTTP). Music Music may be performed using a wide variety of musical instruments, including the human voice. "Synchronized Sound and Movie-House Musicians, 1926–29" Music is the arrangement of sound to create some combination of form, harmony, melody, rhythm, or otherwise expressive content. (1985). Definitions of music vary widely in substance and approach. Archived from the original on 5 April 2007. While scholars agree that music is defined by a small number of specific elements, there is no consensus as to what these necessary elements are. Diverse activities are involved in the creation of music, and are often divided into categories of composition, improvisation, and performance. Music is often characterized as a highly versatile medium for expressing human creativity. Hubbard, Preston J. It can also be composed, sequenced, or otherwise. American Federation of Musicians. Music is generally agreed to be a cultural universal that is present in all human societies
