Oak wilt The pathogen penetrates xylem tissue, preventing water transport and causing disease symptoms. The disease is dispersed by insect vectors and to adjacent trees through underground root networks. The disease is limited to the eastern half of the United States, Central Texas, and Southern Ontario. First described in the 1940s in the Upper Mississippi River Valley. Symptoms generally consist of leaf discoloration, wilt, defoliation, and death. Moving firewood long distances can potentially transport diseases and invasive species. However, human spread is the most consequential dispersal method. through the bark and releasing a fruity odor that attracts wildlife, including sap beetles, bark beetles, other insects, birds and animals, such as squirrels Oak wilt is a fungal disease caused by the organism *Bretziella fagacearum* that threatens *Quercus* spp 8f936469a5

Supply chain management This can include the movement and storage of raw materials, work-in-process inventory, finished goods, and end to end order fulfilment from the point of origin to the point of consumption. Interconnected. A more narrow definition of supply chain management is the "design, planning, execution, control, and monitoring of supply chain activities with the objective of creating net value, building a competitive infrastructure, leveraging worldwide logistics, synchronising supply with demand and measuring performance globally". APICS's certification is called Certified Supply Chain Professional, or CSCP, and ISCEA's certification is called the Certified Supply Chain Manager (CSCM) In commerce, supply chain management (SCM) deals with a system of procurement (purchasing raw materials/components), operations management, logistics and marketing channels, through which raw materials can be developed into finished products and delivered to their end customers 8f936469a5

Under the leadership of chief executive Ray Noorda, NetWare became the dominant form of personal computer networking during the second half of the 1980s and first half of the 1990s. At its high point, NetWare had a 63 percent share of the market for network operating systems and by the early 1990s there were over half a million NetWare-based networks installed worldwide encompassing more than 50 million users. Geographic information system In a broader sense, one may consider such a system also to include human users and support staff, procedures and workflows, the body of knowledge of relevant concepts and methods, and institutional organizations. Generally A geographic information system (GIS) consists of integrated computer hardware and software that store, manage, analyze, edit, output, and visualize geographic data. The implementation of a GIS is often driven by jurisdictional (such as a city), purpose, or application requirements. Much of this often happens within a spatial database; however, this is not essential to meet the definition of a GIS. integration platforms such as SAP 8f936469a5
