Human spaceflight Human spaceflight (also referred to as crewed spaceflight, and historically as manned spaceflight) is spaceflight with a crew or passengers aboard a spacecraft, often with the spacecraft being operated directly by the onboard crew. in the International Space Station and Soyuz spacecraft, while low-pressure pure oxygen is commonly used in space suits for extravehicular activity. People trained for spaceflight are called astronauts (American or other), cosmonauts (Russian), or taikonauts (Chinese); and non-professionals are referred to as spaceflight participants or spacefarers. Humans have had a continuous presence in space since 2 November 2000, on the International Space Station (ISS). Spacecraft can also be remotely operated from ground stations on Earth, or autonomously, without any direct human involvement f26baed2a2
