Automation Schaums outline series, McGraw-Hill 1967 Mayr, Otto (1970). The Origins of Feedback - Automation describes a wide range of technologies that reduce human intervention in processes, mainly by predetermining decision criteria, subprocess relationships, and related actions, as well as embodying those predeterminations in machines. The benefit of automation includes labor savings, reducing waste, savings in electricity costs, savings in material costs, and improvements to quality, accuracy, and precision. and control systems" JJ Di Steffano, AR Stubberud, IJ Williams. Complicated systems, such as modern factories, airplanes, and ships typically use combinations of all of these techniques. Automation has been achieved by various means including mechanical, hydraulic, pneumatic, electrical, electronic devices, and computers, usually in combination b337da22e3
