The similarities and differences between the approaches in each state are analyzed and compared to related reform programs in other states. An in-depth study of regional educational reform in the United States, this Brief is of use to public policy scholars as well as education policy consultants and other school system or state education leaders. Initiated as a result of lawsuits against the states' educational systems, both programs dealt with school funding, specifically funding equalization among districts. This Brief explores school funding reform in the states of Kentucky and Tennessee. In 1990, Kentucky passed the Kentucky Education Reform Act designed to overhaul that state's education system. This Brief examines the environments that precipitated funding reform in each state as well as the outcomes of the reforms on student achievement. Two years later, Tennessee passed the Education Improvement Act which included

the Basic Education Plan, designed to foster equity in funding among the state's schools

New literacies, globally popular among children and adolescents in and out of school contexts, are challenging educators and institutions to rethink pedagogies. As educators begin to embrace the pedagogical possibilities of multimodal texts and digital practices, they are exploring the complexities of assessing these new literacies. Scholars and educators will find this collection full of rich understanding of the assessment concerns raised by new communication practices, youth culture, digital engagements, and semiotic diversification. Chapters offer practical examples of new literacies, and examine how assessment provides insight into the diverse ways in which language is conceived, valued, and used to inform the literate lives of its twenty-first century users. The essays in this book explore what it means to assess the sophisticated textual engagements of new literacies, including reading and writing online, social networking, gaming, multimodal composing, and creating virtual identities
