Unlike with free and open-source software, which are also often distributed free of charge, the source code for freeware is typically not made available. Freeware may be intended to benefit its producer by, for example, encouraging sales of a more capable version, as in the freemium and shareware business models aa67478326

Sound engineering is increasingly viewed as a creative profession and art form, where musical instruments and technology are used to produce sound for film, radio, television, music and video games. List of free and open-source software packages A small fraction of the software that meets either definition is listed here. LibreCAD – 2D This is a list of free and open-source software (FOSS) packages, computer software licensed under free software licenses and open-source licenses. For more information about the philosophical background for open-source

software, see free software movement and Open Source Initiative. modeling computer-aided design (CAD) system. Some of the open-source applications are also the basis of commercial products, shown in the List of commercial open-source applications. FreeCAD – Parametric 3D CAD modeler with a focus on mechanical engineering, BIM, and product design. However, nearly all software meeting the Free Software Definition also meets the Open Source Definition and vice versa. Software that fits the Free Software Definition may be more appropriately called free software; the GNU project in particular objects to their works being referred to as open-source aa67478326

Beam (structure) Beams are characterized by their manner of support, profile (shape of cross-section), equilibrium conditions, length, and material. In engineering, beams are of several types: Simply supported – a beam supported on the ends which are free to rotate and have no moment A beam is a structural element that primarily resists loads applied laterally across the beam's axis (an element designed to carry a load pushing parallel to its axis would be a strut or column). Its mode of deflection is primarily by bending, as loads produce reaction forces at the beam's support points and internal bending moments, shear, stresses, strains, and deflections. may rest on beams aa67478326
