Wikipedia:Reference desk/Archives/Science/May 2006 part 2 The concrete high-rise structures I have seen being built don’t have concrete walls; there is a reinforced concrete "skeleton" this is not true. favouring concrete over wood 22702eb428

31 July 2009[edit] 22702eb428

Reinforced concrete Nilson, Darwin, Dolan. "Techno Reinforced concrete, also called ferroconcrete or ferro-concrete, is a composite material in which concrete's relatively low tensile strength and ductility are compensated for by the inclusion of reinforcement having higher tensile strength or ductility. In corrosion engineering terms, when designed correctly, the alkalinity of the concrete protects the steel rebar from corrosion. In terms of volume used annually, it is one of the most common engineering materials. p. PMID 27878037. 80-90. the MacGraw-Hill Education, 2003.

PMC 5099651. However, post-tensioning is also employed as a technique to reinforce the concrete. 1088/1468-6996/9/4/045009. The reinforcement is usually, though not necessarily, steel reinforcing bars (known as rebar) and is usually embedded passively in the concrete before the concrete sets. Design of Concrete Structures 22702eb428

A properly engineered structure does not necessarily have to be extremely strong or expensive. It has to be properly designed to withstand the seismic effects while sustaining an acceptable level of damage. 22702eb428

Earthquake engineering Its overall goal is to make such structures more resistant to earthquakes. An earthquake (or seismic) engineer aims to construct structures that will not be damaged in minor shaking and will avoid serious damage or collapse in a major earthquake. Its overall goal is to make such structures more resistant to earthquakes Earthquake engineering is an interdisciplinary branch of engineering that designs and analyzes structures, such as buildings and bridges, with earthquakes in mind. designs and analyzes structures, such as buildings and bridges, with earthquakes in mind 22702eb428

Orly Taitz – Relist. This was quite a long debate, so I'll summarize the arguments. Endorse: WP:BLP1E, WP:NOTAVOTE, WP:ATA keep !votes, may become notable in the future but not now. Overturn: Not BLP1E, plenty of media coverage, endorse !voters are treating this as 2nd AfD. The "endorse" arguments are slightly more in number; the "overturn" arguments as a whole are slightly stronger, but not enough to provide a clear consensus. Rd232 brought up an excellent point at the end that no one seemed to notice: that the debate had run for only 4 days. WP:SNOW should not be invoked in general on AfDs, much less in controversial situations like these. Either because there is no consensus in this DRV or because the ... 22702eb428 See Wikipedia:Reference desk archive/Science/May 2006 for the archives of May 1 to May 20 2006. 22702eb428 Deletion review archives 22702eb428
