Intelligence quotient Originally, IQ was a score An intelligence quotient (IQ) is a total score derived from a set of standardized tests or subtests designed to assess human intelligence. For modern IQ tests, the raw score is transformed to a normal distribution with mean 100 and standard deviation 15. Originally, IQ was a score obtained by dividing a person's estimated mental age, obtained by administering an intelligence test, by the person's chronological age. This results in approximately two-thirds of the population scoring between IQ 85 and IQ 115 and about 2 percent each above 130 and below 70. The resulting fraction (quotient) was multiplied by
