Nanotribology The aim of this discipline is characterizing and modifying surfaces for both scientific and technological purposes. Nanotribology is the branch of tribology that studies friction, wear, adhesion and lubrication phenomena at the nanoscale, where atomic interactions and Nanotribology is the branch of tribology that studies friction, wear, adhesion and lubrication phenomena at the nanoscale, where atomic interactions and quantum effects are not negligible 11cfbfa909

Warren P. Mason Mason worked Warren Perry Mason (September 28, 1900 – August 23, 1986) was an American electrical engineer and physicist at Bell Labs. His work included acoustics, filters, crystals and ceramics, materials science, polymer chemistry, ultrasonics, bonding to semiconductors, internal friction, and viscoelasticity. metals to metals and semiconductors, physics of wear, semiconductor strain gauges, metal fatigue, and internal friction of solids and liquids. A graduate of Columbia University, he had a prolific output, publishing four books and nearly a hundred papers. He was issued over two hundred patents, more than anyone else at Bell Labs 11cfbfa909

Classical mechanics Some modern sources include relativistic mechanics in classical mechanics, as representing the subject matter in its most developed and accurate form. The development of classical mechanics involved substantial change in the methods and philosophy of physics. The qualifier classical distinguishes this type of mechanics from new methods developed after the revolutions in physics of the early Classical mechanics is a physical theory describing the motion of objects such as projectiles, parts of machinery, spacecraft, planets, stars, and galaxies. The qualifier classical distinguishes this type of mechanics from new methods developed after the revolutions in physics of the early 20th century which revealed limitations in classical mechanics. philosophy of physics 11cfbfa909

Mason founded the field of distributed-element circuits. He was the first to experimentally show viscoelasticity in individual molecules. He found experimental evidence of electron-phonon coupling in solids and made measurements that aided the theories of phonon drag and superconductivity. Many of Mason's... 11cfbfa909 Levitation excludes floating at the surface of a liquid because the liquid provides direct mechanical support. Levitation

AnimatLab Experiments can be run in which various stimuli are applied and data is recorded, making it a useful tool for computational neuroscience. AnimatLab is an open-source neuromechanical simulation tool that allows authors to easily build and test biomechanical models and the neural networks AnimatLab is an open-source neuromechanical simulation tool that allows authors to easily build and test biomechanical models and the neural networks that control them to produce behaviors. The software can also be used to model biomimetic robotic systems. Users can construct neural models of varied level of details, 3D mechanical models of triangle meshes, and use muscles, motors, receptive fields, stretch sensors and other transducers to interface the two systems 11cfbfa909

Park Jeong Young , M Park Jeong Young (Korean: ???), sometimes written as Park, Jeong Y. S. He is a member of the American Chemical Society and American Vacuum Society among others, an

international committee member of Asian Science Camp, and has served on the editorial boards of Scientific Reports, Advanced Materials Interfaces, Journal of the Korean Physical Society, and New Physics. Park majored in physics at Seoul National University, where he received his B. Interfaces, Journal of the Korean Physical Society, and New Physics. , is a professor in the Department of Chemistry at KAIST and associate director at the Center for Nanomaterials and Chemical Reactions at the Institute for Basic Science 11cfbfa909

Levitation (physics) [1] Mice Levitated in Lab The dictionary definition of levitation (physics) at Wiktionary Diamagnetic Levitation (YouTube) Superconducting Levitation (from Latin levitas, lit. 'lightness') is the process by which an object is held aloft in a stable position, without mechanical support via any physical contact. Retrieved 20 November 2014 11cfbfa909

Levitation is accomplished by providing an upward force that counteracts the pull of gravity (in relation to gravity on earth), plus a smaller stabilizing force that pushes the object toward a home position whenever it is a small distance away from that home position. The force can be a fundamental

force such as magnetic or electrostatic, or it can be a reactive force such as optical, buoyant, aerodynamic, or hydrodynamic. 11cfbfa909 Nanotribological research has historically involved both direct and indirect methodologies. Microscopy techniques, including Scanning Tunneling Microscope (STM), Atomic-Force Microscope (AFM) and Surface Forces Apparatus, (SFA) have been used to analyze surfaces with extremely high resolution, while indirect methods such as computational methods and Quartz crystal microbalance (QCM) have also been extensively employed. 11cfbfa909

Ames National Laboratory The laboratory conducts research into areas of national concern, including the synthesis and study of new materials, energy resources, high-speed computer design, and environmental cleanup and restoration. called the Ames Project, to accompany the Manhattan Project's existing physics program. Its purpose was to produce high purity uranium from uranium ores Ames National Laboratory, formerly Ames Laboratory, is a United States Department of Energy national laboratory located in Ames, Iowa, and affiliated with Iowa State University. It is located

Elisa Riedo S. Engineering and the director of the picoForce Lab. in physics Summa cum Laude from the University of Milano, Elisa Riedo is a physicist and researcher known for her contributions in condensed matter physics, nanotechnology and engineering. Mark Chair Professor of Chemical and Biomolecular Engineering at the New York University Tandon School of Engineering and the director of the picoForce Lab. Professor Elisa Riedo received her B. She is the Herman F 11cfbfa909

In January 2013 the Department of Energy announced the establishment of the Critical Materials Institute (CMI) at Ames Laboratory, with a mission to develop solutions to the domestic shortages of rare-earth metals and other materials critical to US energy security... 11cfbfa909 Creatorverse gained notoriety in the gaming press as the first tablet app released by San Francisco-based Linden Lab, which had previously been known primarily as the creator of the online virtual world Second Life. The product continued the company's positioning as a maker of "shared
