Founded in 2000 by Jeff Bezos, Blue Origin initially operated with a very low profile, funded by Bezos's private investments. In 2015, the company achieved a significant milestone with the first uncrewed launch and landing of the New Shepard and announced plans for New Glenn. In 2021, New Shepard first flew crewed, with Bezos himself on board. Another key achievement came in January 2023 when the company delivered its first BE-4 rocket engine to United Launch Alliance. Despite these milestones, Blue Origin has faced criticism for its perceived slow progress, particularly when compared to SpaceX. Addressing these challenges, the company underwent...

On the Origin of Species The book presented a body of evidence that the diversity of life arose by common descent through a branching pattern of evolution. Darwin included evidence that he had collected on the Beagle expedition in the 1830s and his subsequent findings from research, correspondence, and experimentation. Darwin's book introduced the scientific theory that populations evolve over the course of generations through a process of natural selection, although Lamarckism was also included as a mechanism of lesser importance. It was published on 24 November 1859. Origin myth Creation myths are a type of origin myth narrating An origin myth is a type of myth that explains the beginnings of a natural or social aspect of the world. In Greco-Roman scholarship, the terms founding myth or etiological myth (from Ancient Greek: αἰτιολογία 'cause') are occasionally used to describe a myth that clarifies an origin, particularly how an object or custom came into existence. Creation myths are a type of origin myth narrating the formation of the universe. These stories aim to explain the origins of natural phenomena or human institutions within an already existing world. However, numerous cultures have stories that take place after the initial origin. An origin myth is a type of myth that explains the beginnings of a natural or social aspect of the world

There are no universal rules, or governing bodies enforcing the labeling of coffee. However, there are governmental bodies in some countries that regulate the coffee market, for example in Brazil. Players are selected to represent the Australian state in which they played their first senior rugby league game (either high school or local senior club). Before 1980 players were only selected for interstate matches based on where they

were playing their club football at the time. Queensland was not generally competitive under these selection rules, with a total record of 54 wins, 8 draws, and 159 losses, as their smaller economy and ban on poker machines meant that leagues clubs could not... f81ee0b1ba

Brothers Richard and Robert Garriott, their astronaut-engineer father Owen, and programmer Chuck Bueche founded Origin Systems in 1983 because of the trouble they had collecting money owed to Richard for his games released by other companies. Origin was initially based in the Garriotts' garage in Houston, Texas. The company's first game was Ultima III: Exodus; because of Ultima's established reputation and the fact that the company's games were released on computers and not consoles, Origin survived the video-game crash of 1983 which affected console game developers in North America. It published many non-Ultima games, and Richard Garriott claimed that he received the same royalty rate as other developers. f81ee0b1ba ==

several possible definitions. It can refer to: **Origin (comics)** == Critical explorations of the origin story == **Origin (comics)** In American comic books, it also refers to how characters gained their superpowers and/or the circumstances under which they became superheroes or supervillains. In order to keep their characters current, comic book companies, as well as cartoon companies, game companies, children's show companies, and toy companies, frequently rewrite the origins of their oldest characters. This goes from adding details that do not contradict earlier facts to a totally new origin which makes it seem that it is an altogether different character. **Origin (law)** There are differing rules of origin under various national laws and international treaties. Country of origin labelling (COL) is also known as place-based branding, the made-in image or the "nationality bias". In some regions or industries, country of origin labelling may adopt unique local terms such as terroir used to describe wine appellations based on the specific region where grapes are grown and wine manufactured. **Origin (coffee)** While it is still difficult to accurately authenticate a coffee's origin, recent genomic research indicates that it is possible to identify a DNA fingerprint of coffee trees. This technique may eventually allow buyers of un-roasted, green coffee, to authenticate a single-origin coffee. This would improve the transparency and traceability of coffee. **Origin (mathematics)**

In a Cartesian coordinate system, the origin is the point where the axes of the system intersect. The origin divides each of these axes into two halves, a positive and a negative semiaxis. Points can then be located with reference to the origin by giving their numerical coordinates—that is, the positions of their projections along each axis, either in the positive or negative direction. The coordinates of the origin are always all zero, for example (0,0) in two dimensions and (0,0,0) in three. **Origin**
