Earthing system For similar reasons, most countries now mandate dedicated protective earth connections An earthing system (UK and IEC) or grounding system (US) connects specific parts of an electric power system with the ground, typically the equipment's conductive surface, for safety and functional purposes. Regulations may identify special cases for earthing in mines, in patient care areas, or in hazardous areas of industrial plants. The 1996 and newer editions of the NEC no longer permit this practice. The choice of earthing system can affect the safety and electromagnetic compatibility of the installation. Regulations for earthing systems vary among countries, though most follow the recommendations of the International Electrotechnical Commission (IEC) a38aa8e053

Net neutrality in the United States adhere to four conditions: Open applications: Consumers should be able to download and use any software application, content, or services they desire; In the United States, net neutrality—the principle that Internet service providers (ISPs) should make no distinctions between different kinds of content on the Internet, and to not discriminate based on such distinctions—has been an issue of contention between end-users and ISPs since the 1990s. With net neutrality, ISPs may not intentionally block, slow down, or charge different rates for specific online content. Without net neutrality, ISPs may prioritize certain types of traffic, meter others, or potentially block specific types of content, while charging consumers different rates for that content a38aa8e053
