Using Textbooks Effectively offers ESOL students, teachers, administrators, and specialists insights into the use of textbooks and course materials in specific environments. It also charts strategies for adapting textbooks for different purposes and provides examples of effective classroom applications. Most important, it empowers materials users and designers with the confidence to craft unique learning opportunities. The response, given within Using Textbooks Effectively, is to move beyond the textbook as a separate entity and view it instead as part of the ESOL curriculum process and as a tool for student learning. The chapters illustrate textbook use as a dynamic component of the ESOL classroom ecosystem, consisting of the classroom, the world outside the classroom, and the different communities of language practice. This volume in the TESOL Classroom Practice Series asks one fundamental question, "How can teachers teach the students, not the book. The practitioners in this volume link ESOL textbook use to the three corresponding uses of English: for academic purposes, for social interaction, and for pragmatically appropriate expression in different discourse communities in and beyond the classroom 2d5e60e6e9

Convex optimization problems arise frequently in many different fields. This book provides a comprehensive introduction to the subject, and shows in detail how such problems can be solved numerically with great efficiency. Duality and approximation techniques are then covered, as are statistical estimation techniques. It contains many worked examples and homework exercises and will appeal to students, researchers and practitioners in fields such as engineering, computer science, mathematics, statistics, finance and economics. The book begins with the basic elements of convex sets and functions, and then describes various classes of convex optimization problems. Various geometrical problems are then presented, and there is detailed discussion of unconstrained and constrained minimization problems, and interior-point methods
