

Lymphatic Drainage

Unlike the circulatory system that is a closed system, the lymphatic system is open. The human circulatory system processes an average of 20 litres of blood per day through capillary filtration, which removes plasma from the blood. Roughly 17 litres of the filtered blood is reabsorbed directly into the blood vessels, while the remaining three litres are left... d83b233be8 Drainage basin d83b233be8 Acid mine drainage d83b233be8

Subareolar lymphatic plexus It is a dense network of lymphatics located Subareolar lymphatic plexus, also known as Sappey's plexus is the lymphatic drainage of the areola of the breast. The subareolar plexus of Sappey communicated with the plexus of lymph nodes located in the deep fascia of pectoralis major muscle. It is a dense network of lymphatics located in the dermis. Subareolar lymphatic plexus, also known as Sappey's plexus is the lymphatic drainage of the areola of the breast d83b233be8

Manual lymphatic drainage The lymph system depends on intrinsic contractions of the smooth muscle cells in the walls of lymph vessels (peristalsis) and the movement of skeletal muscles to propel lymph through the vessels to lymph nodes and then to the lymph ducts, which return lymph to the cardiovascular system. Manual lymph drainage uses a specific amount of pressure (less than 9 oz per square inch or about 4 kPa), and rhythmic circular movements to stimulate lymph flow. Manual lymphatic drainage (MLD) is a type of manual manipulation of the skin, not to be confused with massage, based on the hypothesis that it will encourage Manual lymphatic drainage (MLD) is a type of manual manipulation of the skin, not to be confused with massage, based on the hypothesis that it will encourage the natural drainage of the lymph, which carries waste products away from the tissues back toward the heart d83b233be8

Lymphatic vessel Lymph vessels that carry lymph to a lymph node are called afferent lymph vessels, and those that carry it from a lymph node are called efferent. As part of the The lymphatic vessels (or lymph vessels or lymphatics) are thin-walled vessels (tubes), structured like blood vessels, that carry lymph. The lymphatic vessels (or lymph vessels or lymphatics) are thin-walled vessels (tubes), structured like blood vessels, that carry lymph. Lymph vessels are devoted to the propulsion of the lymph from the lymph capillaries, which are mainly concerned with the absorption of interstitial fluid from the tissues. As part of the lymphatic system, lymph vessels are complementary to the cardiovascular system. Lymph vessels are lined by endothelial cells, and have a thin layer of smooth muscle, and adventitia that binds the lymph vessels to the surrounding tissue. Lymph capillaries are slightly bigger than their counterpart capillaries of the vascular system d83b233be8

Meningeal lymphatic vessels As a part of the lymphatic system, the meningeal lymphatics are responsible for draining immune cells, small molecules, and excess fluid from the CNS into the deep cervical lymph nodes. The meningeal lymphatic vessels (or meningeal lymphatics) are a network of conventional lymphatic vessels located parallel to the dural venous sinuses The meningeal lymphatic vessels (or meningeal lymphatics) are a network of conventional lymphatic vessels located parallel to the dural venous sinuses and middle meningeal arteries of the mammalian central nervous system (CNS). Cerebrospinal fluid and interstitial fluid are exchanged, and drained by the meningeal lymphatic vessels d83b233be8

The Latin word for lymph, *lymph*a, refers to the deity of fresh water, "Lymph

A surgical procedure, see Incision and drainage d83b233be8 Though incurable and progressive, a number of treatments may improve symptoms. This commonly includes compression therapy, good skin care, exercise, and manual lymphatic drainage (MLD), which together are known as combined decongestive therapy. Diuretics are not useful. d83b233be8

Protein losing enteropathy The signs and symptoms of protein losing enteropathy include diarrhea Protein losing enteropathy (PLE) is a syndrome in which blood proteins are lost excessively via the gastrointestinal (GI) tract. It may be caused by many different underlying diseases that damage the lining of the GI tract (mucosa) or cause blockage of its lymphatic drainage. damage the lining of the GI tract (mucosa) or cause blockage of its lymphatic drainage

Bronchomediastinal lymph trunk Confluence with Lymphatic and Venous Systems: The drainage patterns into the thoracic duct The bronchomediastinal lymph trunks are essential components of the human lymphatic system, tasked with draining lymph from the tracheobronchial, internal mammary, and anterior mediastinal lymph nodes. influence the efficiency of lymph drainage and immune responses d83b233be8

Manual lymphatic drainage techniques remain a clinical art founded upon hypotheses, theory, and preliminary evidence. d83b233be8 Located in the mediastinum, the central part of the thoracic cavity, these trunks form from the convergence of efferent vessels that ascend along the trachea. Typically, there are two trunks - one on each side of the body. The right bronchomediastinal trunk may connect the right lymphatic duct, and the left trunk to the thoracic duct, although more frequently, they open independently into the junction of the internal jugular vein and subclavian veins on their respective sides. d83b233be8 Lymphedema is most frequently a complication of cancer treatment or parasitic infections, but it can also be seen in a number of genetic disorders. Tissues with lymphedema are at high risk of infection because the lymphatic system has been compromised. d83b233be8

Lymphedema Lymphedema, also known as lymphoedema and lymphatic edema, is a condition of localized swelling caused by a compromised lymphatic system. The lymphatic system functions as a critical portion of the body's immune system and returns interstitial fluid to the bloodstream. includes compression therapy, good skin care, exercise, and manual lymphatic drainage (MLD), which together are known as combined decongestive therapy d83b233be8

While it was historically believed that both the brain and meninges were devoid of lymphatic vasculature, recent studies by Antoine Louveau and Jonathan Kipnis at the University of Virginia, submitted in October 2014, and by Aleksanteri Aspelund, Salli Antila and Kari Alitalo at the... d83b233be8
