

Constellation Guide For Kids

Capricornus Its name is Latin for "horned goat" or "goat horn" or "having horns like a goat's", and it is commonly represented in the form of a sea goat: a mythical creature that is half goat, half fish. Capricornus is one of the constellations of the zodiac. Its name is Latin for "horned goat" or "goat horn" or "having horns like a goat's"; and it is Capricornus is one of the constellations of the zodiac

Capricornus is one of the 88 modern constellations, and was also one of the 48 constellations listed by the 2nd century astronomer Claudius Ptolemy. Its traditional astrological symbol is (♐). Under its modern boundaries it is bordered by Aquila, Sagittarius, Microscopium, Piscis Austrinus, and Aquarius. The constellation is located in an area of sky called the Sea or the Water, consisting of many water-related constellations such as Aquarius, Pisces and Eridanus. It is the smallest constellation in the zodiac.

Flag of Alaska asterism in the constellation Ursa Major, which symbolizes a bear, indigenous to Alaska. The Big Dipper is an asterism in the constellation Ursa Major, which symbolizes a bear, indigenous to Alaska. As depicted on the flag, its stars can be used as a guide by the novice to locate Polaris and determine true north. As depicted on the flag, its stars can be used as a guide by the novice The flag of the U. S. state of Alaska displays eight gold stars, forming the Big Dipper and Polaris, on a dark blue field

5-Star (Stray Kids album) A combination of hip hop, pop, and electronica elements, 5-Star lyrically addresses themes of uniqueness, confidence, and aspirations. It was released on June 2, 2023, through JYP Entertainment and Republic Records, following their seventh EP Maxident (2022). expressing Stray Kids' confidence and "emphasiz[ing] their specialness", and containing a message of being "the most eccentric among the unusual kids, and the 5-Star (stylized as 5STAR) is the third Korean-language studio album (fourth overall) by South Korean boy band Stray Kids

Andromeda (constellation) Andromeda is most prominent during autumn evenings in the Northern Hemisphere, along with several other constellations named for characters in the Perseus myth. It is one of the largest constellations, with an area of 722 square degrees. Located in the northern Andromeda is one of the 48 constellations listed by the 2nd-century Greco-Roman astronomer Ptolemy, and one of the 88 modern constellations. Located in the northern celestial hemisphere, it is named for Andromeda, daughter of Cassiopeia, in the Greek myth, who was chained to a rock to be eaten by the sea monster Cetus. This is over 1,400 times the size of the full moon, 55% of the size of the largest constellation. Because of its northern declination, Andromeda is visible only north of 40° south latitude; for observers farther south, it always lies below the horizon. Andromeda is one of the 48 constellations listed by the 2nd-century Greco-Roman astronomer Ptolemy, and one of the 88 modern constellations

The design was created by Benny Benson of Seward and selected from among roughly 700 entries in a 1927 contest. In 2001, a survey conducted by the North American Vexillological Association placed Alaska's flag fifth best in design quality out of the 72 Canadian provincial, U.S. state, and U.S. territory flags ranked. It finished behind the flags of New Mexico, Texas, Quebec, and Maryland respectively.

Auriga Because of its northern declination, Auriga is only visible in its entirety as far south as 34°; for observers farther south it lies partially or fully below the horizon. Auriga is most prominent during winter evenings in the northern Hemisphere, as are five other constellations that have stars in the Winter Hexagon asterism. Its name is Latin for '(the) charioteer', associating it with various mythological beings, including Erichthonius and Myrtilus. It is one of the 88 modern constellations; it was among the 48 constellations listed by Auriga is a constellation in the northern celestial hemisphere. Auriga is a constellation in the northern celestial hemisphere. It is one of the 88 modern constellations; it was among the 48 constellations listed by the 2nd-century astronomer Ptolemy. A large constellation, with an area of 657 square degrees, it is half the size of the largest, Hydra

List of proper names of stars Kaler These names of stars that have either been approved by the International Astronomical Union or which have been in somewhat recent use. IAU approval comes mostly from its Working Group on Star Names, which has been publishing a "List of IAU-approved Star Names" since 2016. ISBN 0-521-44921-9. book. H. The Cambridge Guide to the Constellations. 170. Cambridge University Press. p. (12 June 1995). As of August 2025, the list included a total of 509 proper names of stars. Bakich, Michael E

He is a Contributing Editor to Sky & Telescope magazine and a contributor to Astronomy magazine. Regas is a frequent guest on nationally broadcast radio shows Science Friday and Here and Now.
