Argonaut class reactor OCLC 71317149. Its functions are to teach nuclear reactor theory, nuclear physics and for use in engineering laboratory experiments. Ingenia. Many have been built throughout the world, over a wide range of power levels. 10: 29–34. Lockwood, Rick; Beeley, Philip (1999). Bond, Martin (5 November 2013) The Argonaut class reactor is a design of small nuclear research reactor. "The removal of the Jason reactor at Greenwich" 6c60e9d68a

A great variety of methods for detecting landmines have been studied. These include electromagnetic methods, one of which (ground penetrating radar) has been employed in tandem with metal detectors. Acoustic methods can sense the cavity created by... 6c60e9d68a In the Stirling engine, a working fluid (e.g. air)... 6c60e9d68a The earliest parts of the current building date to 1072, when bishop Remigius de Fécamp moved his seat from Dorchester on Thames to Lincoln. The building was completed in 1092, but severely damaged in an earthquake in 1185. It was rebuilt over the following centuries in different phases of the Gothic style, with significant surviving parts of the cathedral in Early English, Decorated and Perpendicular. 6c60e9d68a

Leptorhynchos gaddisi gaddisi, and it is
currently the only widely accepted valid
species. The specific epithet is in honor of
the Gaddis family, who owned the land on
which the holotype was discovered.
ISSN 0195-6671. "New elmisaurine
specimens from North America and
Leptorhynchos () is an extinct genus of

caenagnathid theropod from the Late Cretaceous of what is now the US state of Texas, although it has been suggested to also exist in Alberta and South Dakota. 105708. Funston, Gregory; Currie, Philip; Burns, Michael (2015). The type species is L. The generic name of Leptorhynchos comes from the Greek "leptos" meaning "small" and "rhynchos" meaning "beak". 2023. More specifically, the Stirling engine is a closed-cycle regenerative heat engine,

with a permanent gaseous working fluid. Closed-cycle, in this context, means a thermodynamic system in which the working fluid is permanently contained within the system. Regenerative describes the use of a specific type of internal heat exchanger and thermal store, known as the regenerator. Strictly speaking, the inclusion of the regenerator is what differentiates a Stirling engine from other closed-cycle hot air engines. 6c60e9d68a

Demining Daniels, David (June 2018). In military operations, the object is to rapidly clear a path through a minefield, and this is often done with devices such as mine plows and blast waves. Archived from the original on 20 September 2022. Mechanical devices such as flails and excavators are sometimes used to clear

mines. By contrast, the goal of humanitarian demining is to remove all of the landmines to a given depth and make the land safe for human use. Griffin, Scott Demining or mine clearance is the process of removing land mines from an area. Ingenia. 75: 19–23. "Detecting landmines for a safer world" (PDF). Specially trained dogs are also used to narrow down the search and verify that an area is cleared 6c60e9d68a
