Regular expression E. g. See [perlre](#) Archived 2009-12-31 at the Wayback Machine for more details. , see *Java in a Nutshell*, p. 213; *Python Scripting for Computational A* regular expression (shortened as regex or regexp), sometimes referred to as a rational expression, is a sequence of characters that specifies a match pattern in text. Regular expression techniques are developed in theoretical computer science and formal language theory. Usually such patterns are used by string-searching algorithms for "find" or "find and replace" operations on strings, or for input validation

Development communication has been labeled as the "Fifth Theory of the Press", with "social transformation and development", and "the fulfillment of basic needs" as its primary purposes. Jamias articulated the philosophy of development communication which is anchored on three main ideas. Their three main ideas are: purposive, value-laden, and pragmatic. Nora C. Quebral expanded the definition, calling it "the art and science of human communication applied to the speedy transformation of a country and the mass of its people from poverty to a dynamic state of economic growth that makes possible greater social equality and the larger fulfillment of... The flexibility supported by comments allows for a wide degree of content style variability. To promote uniformity, style conventions are commonly part of a programming style guide. But, best practices are disputed and contradictory. Regular expressions are used in search engines, in search and replace dialogs of word processors and text editors, in text processing utilities such as sed and AWK, and in lexical analysis. Regular expressions are supported in many programming languages. Library implementations are often called an "engine", and many of these are available for reuse. Some authors prefer to use the terms anti-Judaism or religious antisemitism in reference to religious sentiments against Judaism which were prevalent before the rise of racial antisemitism in the 19th century. For events which specifically pertain to expulsions and exoduses of Jews, see Jewish refugees. As a form of Western esotericism, the New Age drew heavily upon esoteric traditions such as the occultism of the eighteenth and nineteenth centuries, including the work of Emanuel Swedenborg and Franz Mesmer, as well as Spiritualism, New Thought, and Theosophy. More immediately, it arose from mid-20th-century influences such as the UFO religions of the 1950s, the counterculture of the 1960s, and the Human Potential Movement. Its exact origins remain contested, but it became a major movement in the 1970s, at which time it was centered largely in the United Kingdom. It expanded widely in the 1980s and 1990s. By the start of the 21st century, the term New...

Development communication Development communication techniques include information dissemination and education, behavior change, social marketing, social mobilization, media advocacy, communication for social change, and community participation. Development communication engages stakeholders and policy makers, establishes conducive environments, assesses risks and opportunities and promotes information exchange to create positive social change via sustainable development. "Policy sciences", he states in a nutshell, is the scientific study of policies and policy-making while "policy" is the set of decisions with specific objectives Development communication refers to the use of communication to facilitate social development

The last cigarette commercials on U.S. television and radio were broadcast, and tobacco manufacturers spent US\$1,250,000 for the farewell advertising prior to the ban that went into effect at midnight. The last commercial was a 60-second ad for Virginia Slims that was run by the Philip Morris company at 11:59 during a break on *The Tonight Show* on NBC. The company had bought the last pre-midnight ads on the late night talk shows of all three networks, with ads for Marlboro on CBS on *The Merv Griffin Show* and for Benson & Hedges on ABC on *The Dick Cavett Show*. == Company == Support for code comments is defined by each programming language. Comment (computer programming) The Object Primer: Agile In computer programming, a comment is text embedded in source code that a translator (compiler or interpreter) ignores. Sebastopol: O'Reilly & Associates. *Learning the VI Editor*. ISBN 978-1-56592-426-0. Some development tools, other than a source code translator, do parse comments to provide capabilities such as API document generation, static analysis, and version control integration. For this article, comment refers to the same concept in a programming language, markup language, configuration file and any similar context. Generally, a comment is an annotation intended to make the code easier for a programmer to understand – often explaining an aspect that is not readily apparent in the program (non-comment) code. The syntax of comments varies by programming language yet there are repeating patterns in the syntax among languages as well as similar aspects related to comment content. Lamb, Linda (1998). Ambler, Scott (2004)

Relationship between science and religion Even though the ancient and medieval worlds did not have conceptions resembling the modern understandings of "science" or of "religion", certain elements of modern ideas on the subject recur throughout history. did the monks save and cultivate the remnants of ancient civilization during the barbarian invasions, but the medieval church promoted learning and science The relationship between science and religion involves discussions that interconnect the

study of the natural world, history, philosophy, and theology. The pair-structured phrases "religion and science" and "science and religion" first emerged in the literature during the 19th century. This coincided with the refining of "science" (from the studies of "natural philosophy") and of "religion" as distinct concepts in the preceding few centuries—partly due to professionalization of the sciences, the Protestant Reformation, colonization, and globalization. Since then the relationship between science and religion has been characterized in terms of "conflict", "harmony", "complexity", and "mutual independence", among others c846d0c368

Note: Several of the following events took place earlier than the term "antisemitism" is generally applied. Some even took place when the Israelites and Judeans practiced an early, non-monotheistic form of Judaism known as Yahwism, First Temple Judaism, or First Temple Israelite religion. However, these events feature heavily in the history detailed in the Old Testament, which was foundational... c846d0c368 The applications and functions of citizen science in research projects are multifaceted. Citizen science can be used as a methodology in which public volunteers help in data collection and classification, thereby improving the scientific community's capacity. Citizen science observations can be used to uncover general trends in native habitats across broad spatial and temporal scales, extending data collection beyond the capacity of individual researchers. These observations can then be integrated with findings from designed experiments to provide a more complete understanding of natural variation and ecological processes. Citizen science... c846d0c368 Both science and religion are complex social and cultural endeavors that may vary across cultures and change over time. Most scientific and technical innovations until the scientific revolution were achieved by societies organized by religious traditions. They came into common use with Unix text-processing utilities. Different syntaxes for writing regular expressions have existed since the 1980s, one being the POSIX standard and another, widely used, being the Perl syntax. c846d0c368 January 1971 Palestine Liberation Organization, Research Center. p. The major bowl games of the 1970 college football season saw the No. 1 and No. 2 ranked teams defeated in the afternoon and in the evening, respectively. In Dallas, the Cotton Bowl was a rematch of the 1969 Cotton Bowl, when Notre Dame was upset by Texas. In the rematch, the #1-ranked Texas Longhorns lost to the #6 Fighting Irish of Notre Dame, 24 to 11. Notre Dame, whose shot at No. 1 had been dashed by the Longhorns the year before, snapped a streak of 30 consecutive Texas victories as future NFL great Joe Theismann ran for two touchdowns and passed... c846d0c368 == History == c846d0c368 Citizen science 865–882. pp. Vol. doi:10 Citizen science is research conducted with the participation of the general public, amateur or nonprofessional researchers, or participants from the fields of science, social science, and many other disciplines.
