The book is written and edited by international researchers, academics, and experts in the corresponding research areas. The book is aimed for scientists, researchers, and graduate students. It includes studies on natural resources variability, sustainable soil management, Agro Big Data, Internet of Things, software and mobile apps for precision agriculture, smart weather for precision agriculture, simulations models and decision support systems, expert systems, DGPS, soil physical and chemical characteristic sensors, machinery, etc.

The book contains proceedings of the XV International Scientific Conference INTERAGROMASH 2022, Rostov-on-Don, Russia. The agro-industrial complex is the most extensive and vital industry. Also, the book covers advances in agricultural

biotechnology in such areas of research as crop production improvement practices, genetic modification, as well as microbial biotechnology in agriculture, etc. The book is dedicated to engineering technologies of precision farming and agricultural robotics. Different types of agricultural robots are presented in the book: autonomous fruit picking robots, farming bots that can seed and water plants, test the soil and remove weeds, completely autonomous robot for ecological and economical ultra-high precision spraying and weeding, harvesting robots with the special vision systems that can “see” fruits and understand whether they're ripe and ready to pick, and others. It is also useful for representatives of regional authorities, as it gives an idea of existing high-tech solutions for agriculture. It is rapidly developing by introducing the latest technologies and automating various processes necessary for the functioning of this area 667d73371a
