

Voyage Through The Lifespan Study Guide

Persoonia lanceolata It interbreeds with several other species found in its range. Leioproctus pollinate the flowers. Its small yellow flowers grow on racemes and appear in the austral summer and autumn (January to April), followed by green fleshy fruits (known as drupes) which ripen the following spring (September to October). Swamp wallabies are a main consumer of its fruit, and the seeds are spread in wallaby faeces. lanceolata belongs to the lanceolata group of 58 closely related species. It reaches 3 m (10 ft) in height and has smooth grey bark and bright green foliage. Within the genus Persoonia, P. Its lifespan ranges from 25 Persoonia lanceolata, commonly known as lance-leaf geebung, is a shrub native to New South Wales in eastern Australia 0d5f1e6898

The Weyto are thought to have been one of the Konso tribes that migrated to northern Ethiopia, assimilating through time as a caste among the dominant Amhara people. Their endogamous stratum has existed in the hierarchical Amhara society, one of the largest ethnic groups found in Ethiopia and neighboring regions. Their hereditary occupation was hunting and leather work... 0d5f1e6898 It is a large black vulture with a ruff of white feathers surrounding the base of the neck and, especially in the male, large white patches on the wings. The head and neck are nearly featherless, and are a dull red color, which may flush and therefore change color in response to the bird's emotional state. In the male, there is a wattle on the neck and a large, dark red comb or... 0d5f1e6898

Kes (Star Trek) Kes joins the crew in the pilot episode "Caretaker", opening an aeroponics garden and working as the medical assistant to the artificial intelligence known as the Doctor. Her storylines focus on encouraging the Doctor to develop his humanity and dealing with her Talaxian boyfriend Neelix's jealousy. The series follows the crew of the starship USS Voyager, stranded far from home and struggling to get back to Earth. She is a member of a telepathic alien species known as the Ocampa, who have latent psychic abilities and a lifespan of only nine Kes is a fictional character played by Jennifer Lien on the American science-fiction television show Star Trek: Voyager. She also seeks to expand upon her mental capabilities, leaving in the fourth season after her powers threaten to destroy the ship. intelligence known as the Doctor. She is a member of a telepathic alien species known as the Ocampa, who have latent psychic abilities and a lifespan of only nine years 0d5f1e6898

Shangri-La has become synonymous with any earthly paradise, particularly a mythical Himalayan utopia – an enduringly happy land, isolated from the world. Ancient Tibetan scriptures mention Nghe-Beyul Khembalung, one of seven utopian beyuls which Tibetan Buddhists believe were established in the 9th century AD by Padmasambhava as hidden, sacred places of... 0d5f1e6898 Darwin's early interest in nature led... 0d5f1e6898

Outline of life extension The following outline is provided as an overview of and topical guide to life extension: Life extension – study of slowing down or reversing the processes The following outline is provided as an overview of and topical guide to life extension: 0d5f1e6898

Bigfin reef squids are characterised by a large oval fin that extends throughout the margins of its mantle, giving them a superficial similarity to cuttlefish. They are small to medium-sized squids, averaging 3.8 to 33 centimetres (1.5 to 13.0 in) in length. They exhibit elaborate mating displays and usually spawn in May, but it can vary by location. The paralarvae resemble miniature... 0d5f1e6898

Bigfin reef squid Studies in 1993, however, have indicated that bigfin reef squids may comprise several cryptic species, that are very similar and closely related. They are found in the temperate and tropical Sepioteuthis lessoniana, commonly known as the bigfin reef squid, tiger squid, glitter squid, oval squid, or northern calamari, is a species complex in the loliginid squid family. The diet of bigfin reef squids comprises mainly crustaceans and small fish. It is one of the three currently recognized species belonging to the genus Sepioteuthis. maximum recorded lifespan of 315 days 0d5f1e6898

Life extension The ethical ramifications, if life extension becomes a possibility. is the concept of extending the human lifespan, either modestly through improvements in medicine or dramatically by increasing the maximum lifespan beyond Life extension is the concept of extending the human lifespan, either modestly through improvements in medicine or dramatically by increasing the maximum lifespan beyond its generally-settled biological limit of around 125 years. Several researchers in the area, along with "life extensionists", "immortalists", or "longevists" (those who wish to achieve longer lives themselves), postulate that future breakthroughs in tissue rejuvenation, stem cells, regenerative medicine, molecular repair, gene therapy, pharmaceuticals, and organ replacement (such as with artificial organs or xenotransplantations) will eventually enable humans to have indefinite lifespans through complete rejuvenation to a healthy youthful condition (agerasia) 0d5f1e6898

Northern fulmar action quite unlike the gulls. Fulmars come in one of two colour morphs; a light one in temperate populations, with white head and body and grey wings and tail, and a dark one in arctic populations, which is uniformly grey; intermediate birds are common. There has been one confirmed sighting in the Southern Hemisphere, with a single bird seen south of New Zealand. Though similar in appearance to gulls, fulmars are in fact members of the family Procellariidae, which includes petrels and shearwaters. They are long-lived, with a lifespan of 31 years not The northern fulmar (*Fulmarus glacialis*), fulmar, or Arctic fulmar is an abundant seabird found primarily in subarctic regions of the North Atlantic and North Pacific oceans. They look bull-necked compared to gulls, and have short stubby bills 0d5f1e6898

Shangri-La Shangri-La are almost immortal, living hundreds of years beyond the normal lifespan and only very slowly ageing in appearance. In the novel, the people who live in Shangri-La are almost immortal, living hundreds of years beyond the normal lifespan and only very slowly ageing in appearance. Shangri-La has become synonymous Shangri-La is a fictional place in Tibet's Kunlun Mountains, described in the 1933 novel *Lost Horizon* by the British author James Hilton. Hilton portrays Shangri-La as a mystical, harmonious valley, gently guided from a lamasery, enclosed in the western end of the Kunlun Mountains 0d5f1e6898

Charles Darwin His proposition that all species of life have descended from a common ancestor is now generally accepted and considered a fundamental scientific concept. The observations and theories Charles Robert Darwin (DAR-win; 12 February 1809 – 19 April 1882) was an English naturalist, geologist, and biologist, widely known for his contributions to evolutionary biology. However, it was his five-year voyage on HMS *Beagle* from 1831 to 1836 that truly established Darwin as an eminent geologist. Darwin has been described as one of the most influential figures in human history and was honoured by burial in Westminster Abbey. In a joint presentation with Alfred Russel Wallace, he introduced his scientific theory that this branching pattern of evolution resulted from a process he called natural selection, in which the struggle for existence has a similar effect to the artificial selection involved in selective breeding 0d5f1e6898

Weyto caste The Weyto villages need regularly The Weyto (also Wayto) (Amharic: ???) are a caste living in the Amhara region along the shore of Lake Tana in northern Ethiopia. The Weyto also made up part of the population of the Blue Nile Falls and Fogera, where currently their presence has not been ascertained. They worship the Nile River and their ethnonym is related to the Weito River in Ethiopia's south. They currently live in Bahir Dar, Abirgha, Dembiya and Alefa. Bahir Dar's city boundaries; the buildings are made of clay with thatched roofs and have a lifespan of about five years 0d5f1e6898

The northern fulmar and its sister species, the southern fulmar (*Fulmarus glacialoides*), are the only extant members of the genus *Fulmarus*. The fulmars are... 0d5f1e6898 Life extension – study of slowing down or reversing the processes of aging to extend both the maximum and average lifespan. Also known as anti-aging medicine, experimental gerontology, and biomedical gerontology. 0d5f1e6898 The species is usually found in dry sclerophyll forest on sandstone-based nutrient-deficient soil. It has adapted to a fire-prone environment; plants lost in bushfires can regenerate through a ground-stored seed bank... 0d5f1e6898

Andean condor The Andean condor is a national symbol The Andean condor (*Vultur gryphus*) is a South American New World vulture and is the only member of the genus *Vultur*. It is one of the world's longest-living birds, with a lifespan of over 70 years in some cases. 3 m (10 ft 10 in) and weight of 15 kg (33 lb), the Andean condor is one of the largest flying birds in the world, and is generally considered to be the largest bird of prey in the world. It is found in the Andes mountains and adjacent Pacific coasts of western South America. With a maximum wingspan of 3. are usually laid 0d5f1e6898
